

FIG. 1 is a block diagram of a network architecture. The network architecture includes a United World IP Network (50) connected to a Web Server (64). The Web Server (64) is connected to an Application Server (66) and a Proxy Browser (62). The Application Server (66) is connected to an Application (68). The Proxy Browser (62) is connected to Fat Clients (44) and Thin Clients (18a, 18b, 18c). The Fat Clients (44) are connected to an Application (42a) and a Web Server (42b). The Thin Clients (18a, 18b, 18c) are connected to a Proxy Browser (62). The Proxy Browser (62) is also connected to Skinny Clients (18d, 18e, 18f) and Tiny Clients (18g, 18h, 18i).
